

CyberTracker Mobile Client ArcGIS Integration

Lucas Bradley

Project Goal

- Integrate CyberTracker Mobile Client with ArcGIS

CyberTracker

- Platform for data capture applications
 - Earth Ranger
 - SMART
 - CyberTracker
 - ArcGIS
- Built using Qt
 - Platform independent like Java
- Started in the 90's
- Icon based interface
 - Used by Kalahari Bushmen
- Conservation

ArcGIS

Geospatial Services

Viabale Backend

Conservation Grant

Monetary Benefit

Large Userbase

Expand CyberTracker

Accomplishments

Created a third-party UI which can create projects hosted on ArcGIS that are usable by ArcGIS Mobile Client

Create a specific case to handle ArcGIS integration on the mobile client

UI

Home	Create a New Layer	Logout	Create Layer	Home	Logout
------	--------------------	--------	--------------	------	--------

Layer Name		Layer Icon		Search	
Demo		Browse... No file selected.		<input type="text"/>	
				clear	

Field Name		Field Type		Layers	
Field1		String		Description	
Field Type					
Field Icon		Browse... No file selected.		Demo.zip	
				No description	

List Value	Item1	Delete
List Image	Browse... No file selected.	
List Value	Item2	Delete
List Image	Browse... No file selected.	
Add Item	Delete Field	

Field Name	Field2	
Field Type	Integer	
Field Icon	Browse... No file selected.	
Add Item	Delete Field	

Field Name	Field3	
Field Type	Double	
Field Icon	Browse... No file selected.	
Add Item	Delete Field	

Add Field	Create New Layer	Delete All
-----------	------------------	------------

ArcGIS

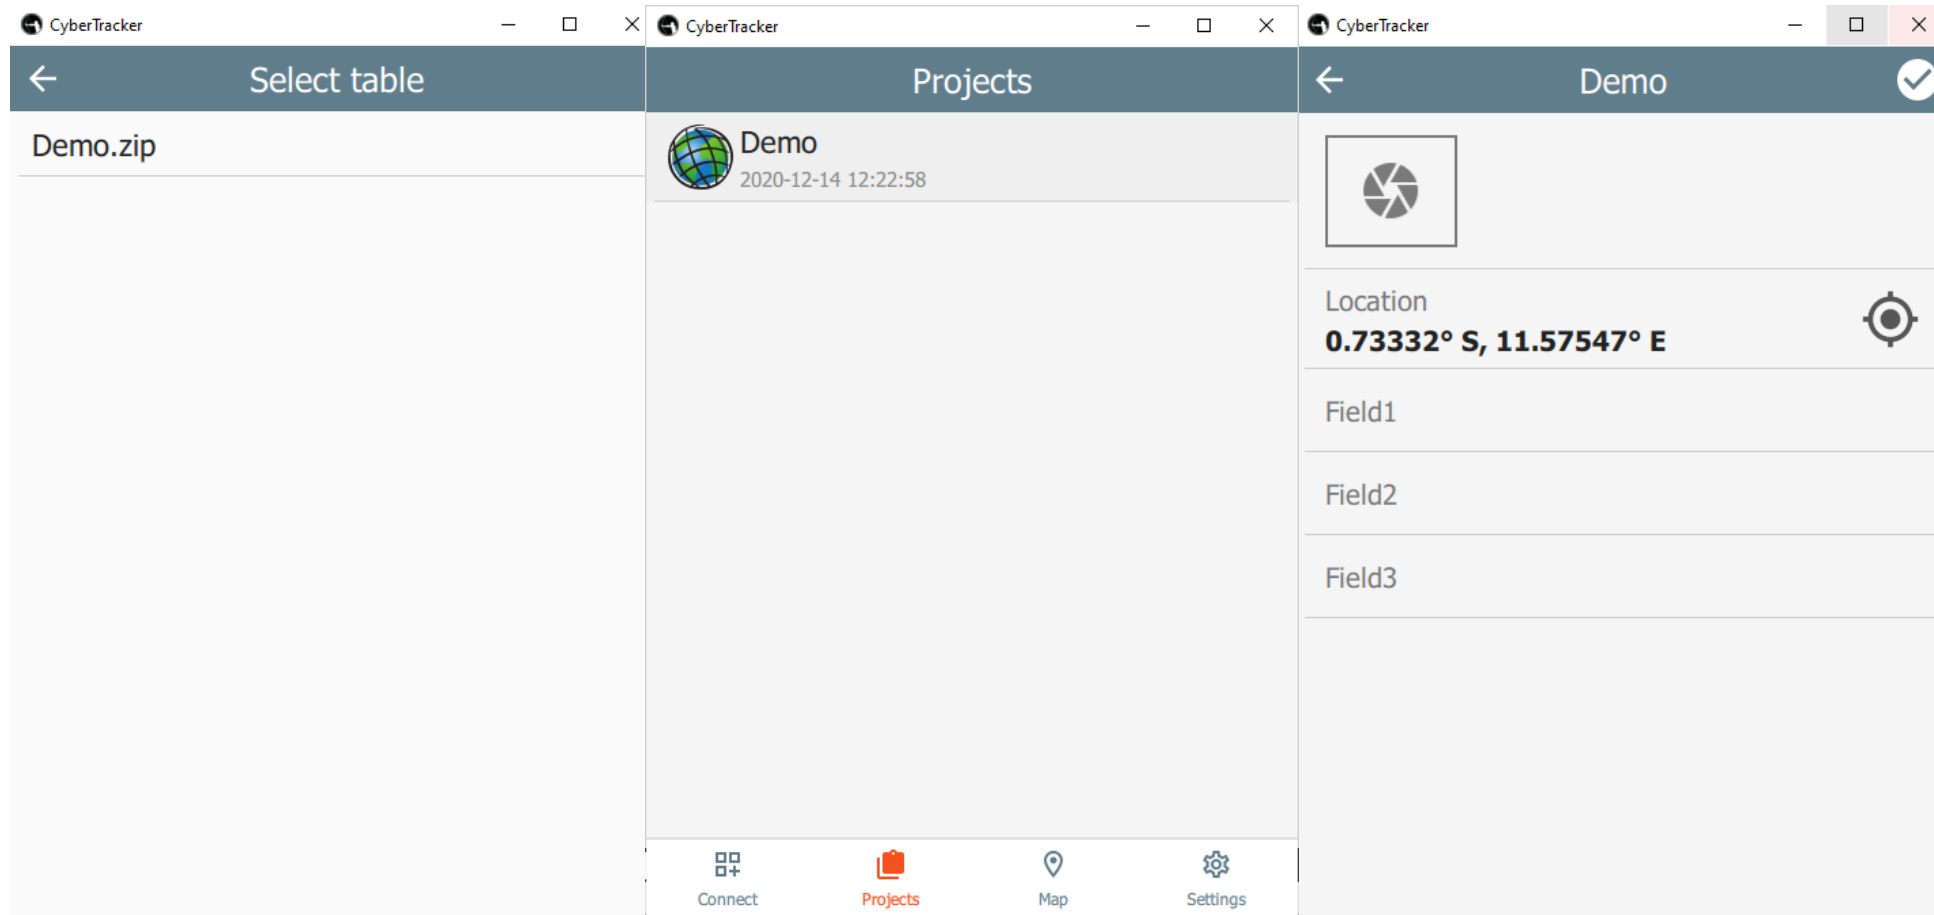

- Creates Feature Layer

<input type="checkbox"/>	 Demo	Feature Layer (hosted)		 ... Dec 14, 2020
--------------------------	--	------------------------	---	--

- Creates Project Zip

<input type="checkbox"/>	 Demo.zip			 ... Dec 14, 2020
--------------------------	--	--	---	--

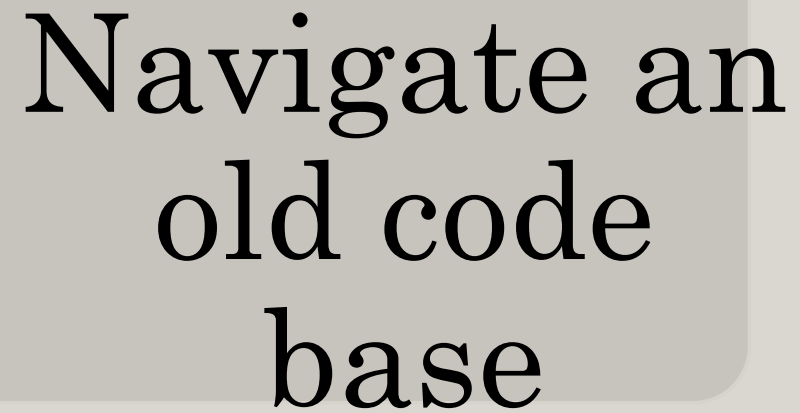

CyberTracker Mobile Client

Learning Technical Skills

- JavaScript
 - Mithril
- HTML
- CSS
- Qt
- ArcGIS REST API
- GitHub
- Azure Static Website

Learning Soft Skills

Navigate an
old code
base

Work with
other
people

What I Liked

Seeing a large project
come together

Learning new tools

Working on something
I'm passionate about

What I didn't Like

Minimal documentation on
code base

No tests on codebase (UI
are notoriously difficult to
make test cases for)

Undeveloped workflow
(Organization is very small)

Courses

CSS 350

CSS 360

CSS 370

CSS 342

CSS 343

CSS 430

CSS 434

Pitfalls

Ask more questions

Reach out when
stuck

Create new
documentation

Learn tools before
studying code base
(Qt and SQL)

Questions
